contract.fit

Full Stack Engineer (m/f)

Your mission is to deliver a top-notch user experience, whether it's by polishing the user interface or patching the server. You'll do whatever it takes

Is this what makes you tick?

- Fast-paced environment with full access to the entire technology stack and minimal governance
- Mastering a variety of technologies, having a broad tool set to get things done as efficiently as possible
- Taking full responsibility for the experience, both for the end user and for third party developers (APIs)

Do you have what it takes?

- Fluency in multiple programming languages (mastery of Python and JavaScript earns you brownie points)
- Experience in setting up and maintaining a secure and performant cloud environment (brownie points for Azure, Linux, and MySQL)
- Willingness to embrace new technologies

Do you care about these?

- Being able to shape the direction of an innovative solution and company
- A great work and learning environment with a work-hard, play-hard culture
- An attractive salary package, with flexibility on mobility and work location

About contract.fit

We are a young and ambitious technology company that brings a one-click user experience to complex information intensive interactions

We seek to excel through state-of-the-art technology engineered by the brightest minds

We embrace the start-up atmosphere in a highly professional feedback-driven environment to ensure we all develop to our full potential

If that's three times 'YES!', then send us a message at careers@contract.fit and we'll be in touch shortly
